

Cleaning & Care Instructions For Fabrics Protected with Nanotex

Remove spills and stains as soon as possible. Nanotex minimizes staining in protected fabrics, but cleaning may still be necessary. However, if spills go unnoticed for a while, Nanotex will make sure your fabric cleans quickly and, above all, easily. Just follow the instructions below.

All Fabric Applications

Liquid spills:

- Gently blot (don't rub) the spill with an absorbent cloth.
- Wipe off the area with clean water and a clean cloth.

Semi-solid spills:

- Try to lift the spot off the fabric by working it in a circular motion or by lifting it from the side. Working in a circular motion or removing the spill from the side is often the best means to lift spills from the fabric.
- Use a towel or absorbent cleaning cloth and avoid spreading the stain by pressing the spill. Try to avoid the spill or spreading the stain.
- Wipe off the area with clean water and a clean cloth.

Stubborn semi-solid spills:

- Try to lift the spot off the fabric by working it in a circular motion or by lifting it from the side. Working in a circular motion or removing the spill from the side is often the best means to lift spills from the fabric.
- Mix water and a mild detergent, such as Tide free, and apply the solution to the stain using a rag in a circular motion.
- If the stain remains, use a dry cleaning fluid, such as Fantastik® Orange Action All Purpose Cleaner, or bleach.
- Wipe the area with water and a clean cloth, but do not rub harshly (this can push the soil into the fibers).
- Remove all soap and cleaning agent residue from the surface with clean water to avoid build-up.
